

XM-2040P

The XM-2040P is a special version of the market proven Xilica XM-2040 DSP module, but which is plug-and-play compatible with amplifier modules from Pascal Audio for extremely easy integration into selfpowered loudspeakers.

High-end Performance

The XM-2040P offers the same high-end performance and specifications as the existing Xilica XM-2040 DSP-card. This also includes the extra options for ethernet connectivity. For more information Download XM-2040 product sheet from www.xilica.com

Fully Integrated

The XM-2040P module is fully optimized for compatibility for amplifier modules from Pascal. I.e. the DSP-cards get all necessary power from the amplifier module and the design is made for optimal dynamic range for DSP + amplifier combination.

Power Options

Currently the following amplifier modules are available for which the XM-2040P is compatible:

X-PRO1: 2400 W

X-PRO2: 2400 + 700 W

X-PRO3: 2400 + 700 + 700 W
